

Want to lower your energy costs? We can help.

Every building has energy-saving potential. Find yours with CPS Energy's building optimization services and incentives.

Building optimization services

Did you know the average commercial building wastes 30 percent of its energy? Let's lower that percentage. CPS Energy's Commercial Solutions Program offers incentives and services to help you save money by optimizing the energy performance of your building.

What's in it for you?

We'll cover 100 percent of the building optimization study and provide incentives based on energy savings (\$200 per kW and \$0.05 per kWh). Incentives are capped at 100 percent of the total project cost. Along with these upfront savings and a lower energy bill, you'll also enjoy more comfortable facilities.

How does it work?

The process is simple. Start by contacting a Technical Service Provider to schedule an on-site building screening to identify potential energy-saving enhancements. After the screening, you'll be provided with preliminary energy cost savings, incentives, and investment payback calculations for the measures identified. You'll then work with your qualified Technical Service Provider to implement the measures you select.

About our optimization services

Express Building Tune-up

- Streamlined energy survey with simplified "find and fix" approach
- Focuses on low-cost and no-cost improvements that won't require detailed engineering analysis
- Must use an enrolled and qualified Technical Service Provider
- Typical projects: scheduling programmable thermostats, adjusting ventilation, economizers, etc.
- Custom Whole Building incentives are available for non-prescriptive optimization improvements
- Estimated savings: 5 percent

Express Building Tune-up benefits

- Short payback periods, generally less than two years
- Reduced operating and maintenance costs
- Shifts focus from reactive to preventative maintenance
- Addresses problems that have developed throughout the facility's life
- Provides customers with incentives for ensuring facilities are operating at peak performance through a systematic process
- Saves energy without a large capital investment
- Typical timeline is four weeks or less

Get started

Visit cpsenergy.com/business for more information and a list of current Technical Service Providers.

Call a Technical Service Provider today to schedule a screening and get qualified for incentives.
